

*Thankyou for purchasing our decals*  
**PLEASE READ THE FOLLOWING**

*There are a couple of things to be aware of before you apply to your Thermomix.*

1. *Thoroughly clean the surface so it is free of any dirt,grease, oil or dust. Failure to do so thoroughly could result in the sticker lifting.*
2. *Close all doors and windows to prevent any dirt, dust, hair, etc from blowing under your sticker. These can cause visible marks on the sticker.*
3. *The decals come in parts for easy application.*
4. *We suggest wetting a cloth with a small dot of dishwashing liquid and wiping the machine face and leaving it wet. This will allow you to slide the sticker until the exact desired position is obtained.*
5. *Peel away the backing sheet on the first decal.*
6. *Align the decal as best you can using the shape of the design as a guide. The decals are removable so you can remove and reposition until you are happy with the placement.*
7. *Once you are happy be sure to smooth out any water and air bubbles trapped under decal by using a squeegee motion and lifting and replacing the decal until ALL air bubbles are gone.*
8. *Any air or dirt trapped under the decal will result in the decal lifting in that spot and causing a poor finish.*
9. *Repeat the process for the other decal(s) now using the applied decal as a lining up reference.*
10. *If you keep the backing sheet you can later remove and change the decals as you please.*

***We would absolutely LOVE to see a photo of your Thermie all dressed up so please visit our Facebook page and post a pic to our wall for everyone to see!***

***Don't forget to follow us and join the 27K other people who are taking advantage of our weekly giveaways and***  
***FACEBOOK ONLY Sales!***

We provide this "How to Apply" instruction guide as a guide only. Please use a method that you feel works best for you.  
We want your decal to look its absolute best but ultimately that will depend on you and how well you apply the decal to your machine. Different people will have different degrees of success in accurately and meticulously applying the decal.  
Due to differences in environmental conditions, application methods and cooking habits (i.e. frequency and duration of the machine reaching high temperatures) we cannot accept responsibility for an unsatisfactory finish to your decal.
